Melts (see Figure L2.1). Scientists Classify Changes In Matter As Either A Chemical Change Or A Physical Change. A Chemical Change Is Defined As A Change In The Composition And Properties Of A Substance. Chemical Changes Involve The Rearrangement Of Molecules Or Atoms And Result In The Production Of One Or More New Substances. Physical Changes Involve Changes In The Physical Properties Of A Substance, But The Chemical Composition Remains The Same. Examples Of Physical Changes Include Melting, Freezing, Boiling, Condensing, Sublimation, and Dissolving. Examples Of Chemical Changes Include Burning, Rusting, and Digestion. The Law Of Conservation Of Mass States That Matter Cannot Be Created Or Destroyed, Only Changed. This Means That The Total Mass Of The Reactants Must Be Equal To The Total Mass Of The Products In A Chemical Reaction. The Law Of Conservation Of Energy States That Energy Cannot Be Created Or Destroyed, Only Changed. This Means That The Total Energy Of The System Must Remain Constant In A Chemical Reaction. The First Law Of Thermodynamics States That The Change In Internal Energy Of A System Is Equal To The Heat Added To The System Plus The Work Done On The System. The Second Law Of Thermodynamics States That The Entropy Of A System Always Increases Over Time. The Third Law Of Thermodynamics States That The Entropy Of A System Approaches Zero As The Temperature Approaches Absolute Zero. The Zeroth Law Of Thermodynamics States That If Two Systems Are In Thermal Contact With A Third System, And Both Systems Are In Thermal Equilibrium With The Third System, Then The Two Systems Are In Thermal Equilibrium With Each Other. The laws of thermodynamics are fundamental principles that govern the behavior of matter and energy. They are essential for understanding the physical world and for developing new technologies. The laws of thermodynamics are also used in many fields of science, including chemistry, physics, and engineering. The laws of thermodynamics are also used in many fields of science, including chemistry, physics, and engineering. The laws of thermodynamics are also used in many fields of science, including chemistry, physics, and engineering.
