Equations are written in the form  $y = kx$ , where  $k$  is the constant of proportion (which is also called the constant of proportion). This equation can also be expressed as  $\frac{y}{x} = k$ . This form helps us realize that in a direct variation relationship the quotient of  $y$  divided by  $x$  will always be the same.

Direct Variation and Inverse Variation Worksheet

This worksheet explains how to troubleshoot problems with direct variation. A sample problem is resolved, and two practice issues are provided. You will solve word-based problems like: The speed of the car travelling from A to B changes upside down with the time it took to travel.
