W. Weinberg suggested a scheme whereby evolution could be viewed as changes in the frequency of alleles in a population of organisms. They established what is now known as the Hardy-Weinberg principle. The Hardy-Weinberg principle states: the frequency of an allele in a population remains constant from generation to generation if certain conditions are met. The Hardy-Weinberg principle, discovered independently by G.H. Hardy and W. Weinberg in 1908, is one of the simplest and most important principles in population genetics. To illustrate the principle, consider a large population of sexually reproducing organisms. Hardy-Weinberg remember is a way to describe ...
