2th, 2024. Phys102 Lecture 34/35 Nuclear Physics and Radioactivity Binding Energy and Nuclear Forces The force that binds the nucleons together is called the strong nuclear force. It is a very strong, but short-range, force. It is essentially zero if the nucleons are more than about 10-15 fm apart. The Coulomb force is long-range; this is why the nucleus is held together.

1th, 2024 Chapter 17 Radioactivity and Nuclear Chemistry 17.2 The Discovery of Radioactivity: Antoine-Henri Becquerel • In 1896, French scientist, Antoine-Henri Becquerel (1852-1908), discovered radioactivity. • Becquerel hypothesized that invisible emission of X-rays was associated with the visible greenish glow of phosphorescence. • To test his hypothesis, Becquerel placed crystals of potassium uranyl sulfate on a photographic plate wrapped in black paper. • The plate was exposed to light and then developed. • The plate showed a dark spot where the crystals had been. • This was the first discovery of radioactivity.

2th, 2024 Ch. 20: Radioactivity and Nuclear Chemistry • Antoine-Henri Becquerel discovered radioactivity accidentally while studying X-rays and phosphorescence (the “glow” in “glow in the dark”). I. Introduction • Crystals of potassium uranyl sulfate were used to try and prove that
