© "Amy" Brown "Science" © "Amy" Brown "Science" 40 R The Krebs cycle begins when _____ produced by glycolysis
enters the mitochondrion. The Krebs cycle begins with a series of reactions that are some of the most important in cellular
respiration. In detail, useful electricity. During cellular respiration, oxygen and digested molecules from food are used to
produce useful energy in the form of ATP. MAIN IDEA Glycolysis is needed for cellular respiration. In section 4.4 you read
a summary of how cellular respiration produces ATP molecules. But cellular respiration, like photosynthesis, is a very
complex process. Cellular respiration releases stored energy as ATP and heat. Look at figure 4.17, and think about other similarities and
differences between the processes. FIGURE 4.17 PHOTOSYNTHESIS AND CELLULAR RESPIRATION PHOTOSYNTHESIS

ENERGY Biological systems use energy and molecular building blocks to grow, reproduce, and maintain homeostasis. 5.
For learning target #5, construct a Venn diagram that shows the similarities and differences between cellular respiration
and photosynthesis... Feb 1th, 2024 CELLULAR RESPIRATION: AEROBIC HARVESTING OF CELLULAR ... Fermentation enables
cells to produce ATP without oxygen. Fermentation is a way of harvesting chemical energy that does not require oxygen.
Fermentation takes advantage of glycolysis, produces two ATP molecules per glucose, and reduces NAD^+ to NADH. The
trick of fermentation is to provide an anaerobic path for recycling NADH back to NAD^+ . Mar 1th, 2024 SECTION OVERVIEW

The overall process of cellular respiration converts sugar into ATP using oxygen. Cellular respiration is a process in all
eukaryotes that breaks down sugars and other carbon-based molecules to make ATP when oxygen is present. Jun 1th,
